

# Zee Cine Awards - Bollywood

Working for ESS, we helped to bring a colourful burst of glamour to the East End of London for the Zee Cine Awards 2008, a key event in the Bollywood calendar. We were involved in providing both scenic elements and automation for the event that was held at the ExCel Exhibition Centre in Docklands.

Included in the scenic brief was a 14m wide proscenium arch, front flats, side cycs, masking for various truss elements and two sets of treads - one to the front of the stage and another flight centre stage that we fitted with LED lighting. We also constructed a slotted ceiling, building three large panels and attaching them to truss provided by the client. Two large filled cloth drapes were fitted either side of the stage.

The two presenters were 'revealed' via a 2.5m scissor lift embedded into the stage and controlled using Qmotion, our motion control system. Qmotion was also employed to control the tracking and motion control for a video wall at the rear of the stage. This was also utilised as an entry/exit point for the Bollywood celebrities.
